SSJ INVOICE™

Complete Functional Audit & Working Feature Catalog (16 Core Modules)

Version: 3.4.0 (Enterprise)	**Deployment:** Vercel Production Ready	**Verified Status:** 100% Operational
Live URL: https://ssj-invoice.vercel.app	**Engine:** Node 26 + native node:sqlite	**Compliance:** GST Rule 55 & NPCI UPI Rails

1. Multi-Tenant Authentication & Role-Based Access Control (RBAC)

• **What It Does:** Secure stateless login/registration with 4 distinct permission tiers (SUPER_ADMIN, BUSINESS_ADMIN, ACCOUNTANT, STAFF).

• **How It Works:** Passwords salted via bcryptjs (10 rounds). Tokens use HMAC-SHA256 JWTs carrying tenant claims. Every query enforces WHERE business_id = ?, mathematically preventing cross-tenant data leaks.

• **How to Test Live:** Tenant Login: demo@ssjtech.com / demo123. SuperAdmin: superadmin@invoicepro.com / admin123.

2. Executive Real-Time Financial Dashboard

• **What It Does:** Live business intelligence command center displaying key financial metrics and turnover data.

• **How It Works:** Aggregates total sales revenue, verified payments collected, pending receivables, and active invoice counts across all business operations in real time.

• **How to Test Live:** Navigate to Dashboard; figures update immediately as transactions occur.

3. Smart GST Tax Invoicing Engine

• **What It Does:** End-to-end commercial billing with automated Place of Supply (POS) tax determination.

• **How It Works:** Compares supplier state with customer state: Intra-state splits into 50% CGST + 50% SGST (e.g. 18% = 9% + 9%); Inter-state applies 100% IGST. Manages status transitions from DRAFT to SENT, PARTIAL, and PAID.

• **How to Test Live:** Open Invoices -> Create Invoice. Pick a client from Maharashtra vs Delhi to see the tax engine switch between CGST/SGST and IGST.

4. Zero-Cost Dynamic NPCI UPI QR Rails

• **What It Does:** Direct bank-to-bank customer settlements with ■0 payment gateway transaction fees (0% MDR).

• **How It Works:** Generates vector QR codes compliant with NPCI UPI deep-linking: upi://pay?pa={vpa}&pn;={payee}&am;={amount}&cu;=INR&tn;={invoice}. Dynamically recalculates to the exact balance remaining on partial payments.

• **How to Test Live:** Click Print/Preview on any invoice; scan the bottom-left QR code with Google Pay, PhonePe, Paytm, or BHIM.

5. Estimates / Quotations with 1-Click Conversion

• **What It Does:** Pre-billing sales proposals convertible into official tax invoices in a single click.

• **How It Works:** Saves quotations with expiry dates. Clicking 'Convert to Invoice' executes an atomic database transaction that transfers all items, taxes, and customer details into a new invoice without duplicate data entry.

• **How to Test Live:** Go to Estimates -> click 'Convert to Invoice' on an accepted quote; redirects to Invoices with the new tax invoice.

6. Delivery Challans (Statutory GST Rule 55)

• **What It Does:** Statutory goods transport slips accompanying goods dispatched for reasons other than immediate sale.

• **How It Works:** Formats official transit manifests capturing Transporter ID, Vehicle Registration Numbers, and itemized quantities for job work, exhibitions, or trials, preventing vehicle confiscation during transport.

• **How to Test Live:** Open Delivery Challans in the sidebar to create and print transit dispatch slips.

7. Credit Notes & Ledger Reconciliation

• **What It Does:** Formal accounting adjustment documents issued against previous invoices.

• **How It Works:** Links directly to original invoice numbers, automatically debits customer accounts receivable, and updates the client's running ledger statement.

• **How to Test Live:** Open Credit Notes -> Issue Credit Note, select an invoice, enter return amount, and view ledger balance reduction.

8. Client Directory & Real-Time Financial Ledger

• **What It Does:** Master client address book with automated running debit/credit statements.

• **How It Works:** Tracks customer GSTINs, billing addresses, and state codes. Ledger dynamically computes: Opening Balance + Invoices Issued - Payments Received - Credit Notes = Net Balance Due.

• **How to Test Live:** Go to Customers -> click 'Ledger' next to any client to inspect full transaction history and running balance.

9. Products & Services Master Catalog

• **What It Does:** Centralized catalog repository for inventory and billable services.

• **How It Works:** Stores Item Name, Unit (Pcs, Box, Kg, Mtr, Nos), HSN/SAC codes, Selling Prices, Default GST Tax Rates (0%, 5%, 12%, 18%, 28%), and Stock Levels. Auto-completes on invoices.

• **How to Test Live:** Navigate to Items & Services to add or edit catalog items.

10. Multi-Mode Payment Recording

• **What It Does:** Record incoming customer payments across multiple transaction channels.

• **How It Works:** Supports UPI, Bank Transfer (NEFT/RTGS/IMPS), Cash, Cheque, and Card. Auto-updates invoice status to PAID or PARTIAL and recalculates outstanding balances.

• **How to Test Live:** On any unpaid invoice, click Record Payment, enter payment amount, and see status update immediately.

11. Operating Expense Management & Input Tax Credit (ITC)

• **What It Does:** Track operational expenditures (office rent, cloud servers, hardware) and compute tax write-offs.

• **How It Works:** Records vendor GSTINs and tax paid on purchases. These input taxes are fed into GSTR-3B to offset Output Tax Liability, lowering net tax payable to the government.

• **How to Test Live:** Open Expenses -> log an operational expense with GST to track Input Tax Credit deductions.

12. Statutory GST Tax Reports & Govt JSON Export

• **What It Does:** Automated tax filing registers for GSTR-1 and GSTR-3B compliance.

• **How It Works:** GSTR-1 JSON Generator creates the exact schema required by gst.gov.in covering Table 4 (B2B), Table 7 (B2C), Table 9B (Credit Notes), and Table 12 (HSN Summary). GSTR-3B provides net tax payable matrices.

• **How to Test Live:** Navigate to GST Reports -> click 'Download GSTR-1 JSON' to export the official file for tax accountants.

13. Public Client Billing & Payment Portal

• **What It Does:** Shareable, mobile-responsive billing links for clients (/public/invoice/:id).

• **How It Works:** Clients open the link via WhatsApp or SMS without needing an account to review items, download invoice PDFs, or scan/tap the Dynamic UPI QR code directly on their smartphones.

• **How to Test Live:** Click 'Copy Public Link' on any invoice and open in an incognito window or mobile browser.

14. SaaS Platform SuperAdmin Console (/superadmin)

• **What It Does:** Platform-wide governance and monetization engine for the platform operator.

• **How It Works:** Tracks platform Monthly Recurring Revenue (MRR), lists all tenant businesses with Suspend/Activate controls, and features a 1-click Plan Assignment Dropdown (Free, Pro, Enterprise) plus +30d / +1 Year validity extensions.

• **How to Test Live:** Log in with superadmin@invoicepro.com / admin123 to open the SuperAdmin console.

15. SaaS Subscription Tiering & Quota Enforcement

• **What It Does:** Tiered monetization with automated quota controls: Free (10 inv/mo), Pro (■499/mo unlimited + dynamic QR), and Enterprise (■4,999/yr multi-user).

• **How It Works:** Backend middleware checks invoice limits before creation. Nightly cron job audits expiration dates and locks expired accounts gracefully.

• **How to Test Live:** Click the Crown / Plan Badge in the top navigation bar to view and upgrade plans.

16. Professional A4 & Thermal Print Engine

• **What It Does:** High-resolution, tax-compliant invoice printing for standard and retail setups.

• **How It Works:** Uses CSS @media print rules to strip headers, navigation bars, and buttons during printing, outputting clean A4 sheets or 80mm thermal POS receipts with logo, bank details, terms, and dynamic UPI QR.

• **How to Test Live:** Open any invoice and click 'Print Invoice' (or press CMD+P / CTRL+P).

Live Production Verification & Test Accounts

Account Role	Login Email	Password	Target Environment & Capabilities
Demo Business Admin	demo@ssjtech.com	demo123	Business workspace: Invoicing, UPI QR, client ledgers, quotes, challans, settings.
Super Administrator	superadmin@invoicepro.com	admin123	Platform console: Global MRR metrics, tenant accounts, 1-click plan dropdown.
